# Exterior Shutter

## *Introduction*

Charleston, SC has weathered many severe hurricanes during the past centuries. Our shutter hardware reflects the quality and strength to withstand such severe conditions. We galvanize then powder coat our iron hardware since it is under attack from salt spray.

Our extensive collection of hand wrought iron shutter hardware consists of exact reproductions of early American pieces.

In addition to our iron hardware, we offer a line of stainless steel hinges and pintles in a large number of offsets. We use the highest grade of stainless and supply stainless steel fasteners.

We offer economy window sets of shutter hardware. Two pairs of pintles and 2 pairs of L-shaped hinges per set with stainless fasteners are \$45.00 per window.

Our Bermuda shutter hardware is more economical in cost per shutter, much better looking and more user friendly. By removing a pair of cotter pins from our hinges, a shutter may be taken down for painting. (Try that with a piano hinge). Our traditional 15" hand wrought hooks are better looking, easier to install and less expensive than aluminum push arms.

There are many different scenarios to consider when determining the correct offset. See pg. **14A-15** or contact our sales team for assistance.
