

# Back Plates

# Back Plates

## Introduction

Our back plates are reproduced using dies and moulds re-made from antique original pieces. They are made by casting or pressing one piece at a time using the same techniques from over a century ago.

Configurations: Passage tubular, privacy tubular, keyed mortise lock, privacy mortise lock, passage mortise lock

**Passage back plates** are used for doors that don't lock and for dummy applications

**Privacy tubular back plates** are used for interior doors that lock. The locking pin is located adjacent to the doorknob. On the hall side there is a small hole that allows for emergency access.

**Keyed back plates** are used with keyed mortise locks

**Privacy turn back plates** are used with privacy mortise locks. The interior has a turn piece, the exterior has a key hole for emergency access.

**Passage mortise locks** are used on doors that do not lock.

Pre-bored doors have a 2 1/8" hole through the door. Only back plates 2 1/4" and wider can be used with these doors.

Passage Tubular

Passage latch pg. **8A-2**  
Dummy Spindles pg. **6B-2**

Privacy Tubular

Privacy latch pg. **8A-2**

Keyed Mortise

Keyed mortise lock pg. **8A-3**
