Doorknobs: *Ceramic*

Ceramic Doorknobs

Introduction

Ceramic doorknobs date as far back as 1840. Common colors made were white, black and Bennington. The Bennington doorknobs are made of several colors of clay, hand swirled, then fired. Each knob has a different design with colors that go all the way through the knob. They are also referred to as "mineral" knobs.
Mortise lock doorknobs have straight ferrules to fit into back plates or rosettes.
Rim lock doorknobs have one straight ferrule and one flared ferrule that rests directly on the lock. Undersized knobs are perfect for small closets and french doors. Matching cabinet knobs complete the series.
